

SILBO

Innovative approach and  
the highest quality is  
always combined with  
care for nature

Marcin Śpiewok  
President of SILBO

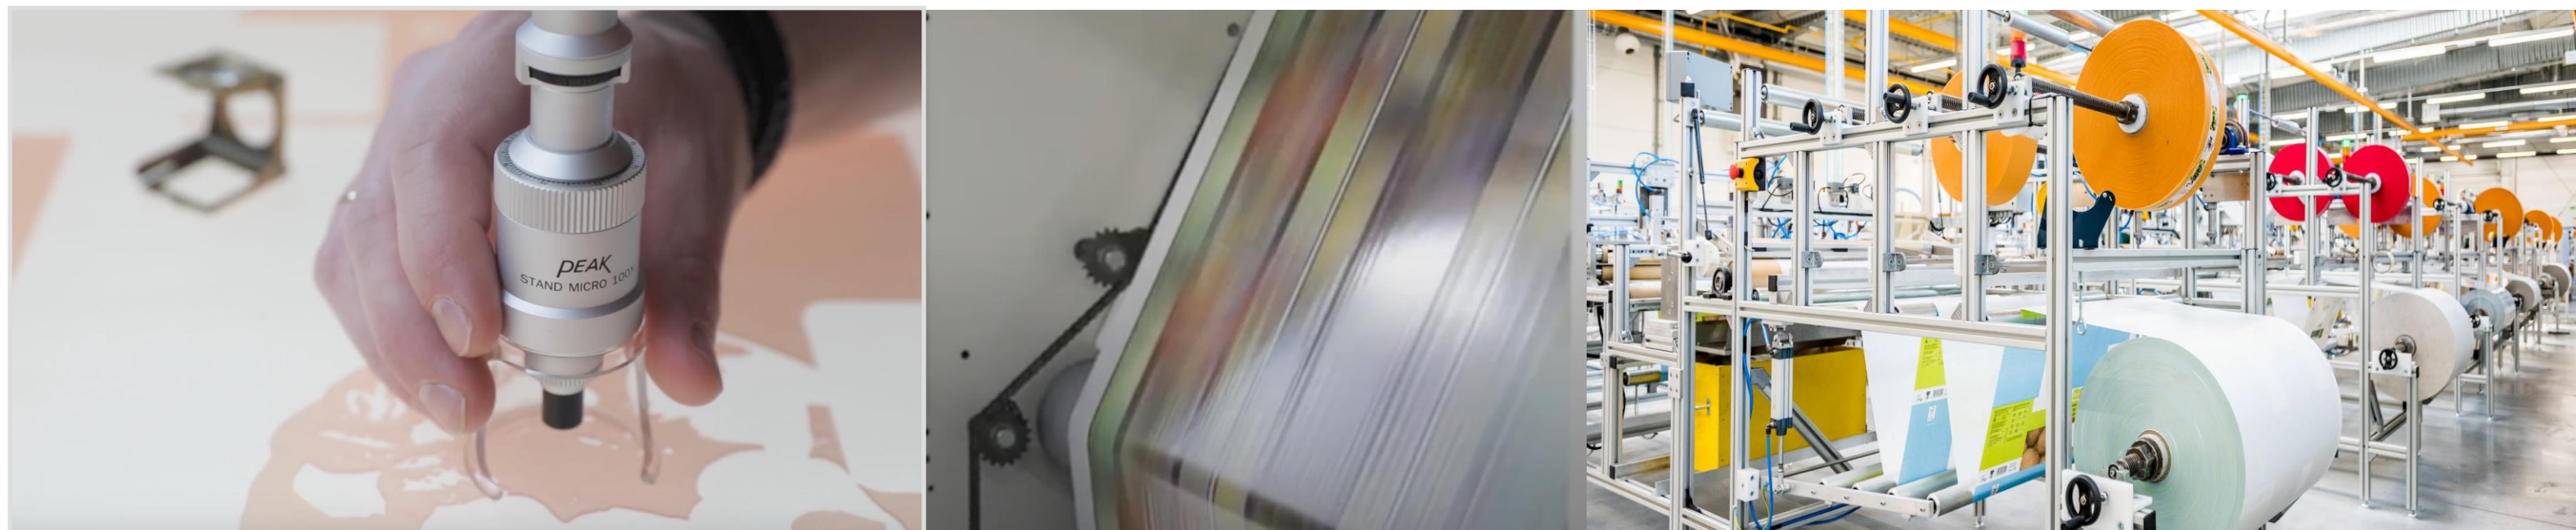

# The basis of SILBO ecological approach was introduction of water-based printing and lamination technology

- searching for plastic alternatives
- health protection of employees
- reduction of CO2 emission

# Quality and scope of application

- printed graphics are prepared in HD technology with screen ruling of 150lpi
- average printing speed - 270 m/min
- surface and reverse printing
- wide range of printed materials: PLA, cellulose, PBS, paper, PE, PP, PET and aluminium

## Biosil

Compostable packaging that do not contain traditional plastic, as well as products made from easily recyclable organic materials with minimum impact on the environment.

## Minisil

Packaging with unusual low weight and reduced plastic content

## Monosil

Monomaterial packaging in which plastics are not mixed. Such products can be easily recycled

SILBIO

# Logo used on all SILBO products

—  
NQTIC

## Next steps...

- own water purification system
- second printing press for water-based inks

# Thank you for your attention.
